

HAJ AYED Chames

Industrial Automation Lead

hadjayed.chames@gmail.com +216 97 642 178 Age: 35

Industrial Automation & Maintenance Leader with extensive experience in embedded systems engineering and automotive manufacturing operations. Specialized in the design, implementation, and optimization of predictive maintenance strategies, robotics, and automated production lines to maximize equipment reliability and efficiency. Proven ability to manage multidisciplinary teams of technicians and engineers while overseeing preventive, corrective, and predictive maintenance activities, driving continuous improvement initiatives, and delivering significant gains in OEE, cost reduction, and operational excellence. Strong project management expertise in CAPEX, technical specifications (cahiers des charges), supplier coordination, and the successful integration of new automated cells and robotic systems.

1 Experience

Robotics & Industrial vision Lead	Hutchinson	2024 – Now
• Led a team of 3 technicians and 4 engineers in the industrialization and optimization of automated production lines in the automotive sector, driving preventive, corrective, and predictive maintenance strategies for major equipment including robotic systems, vision-based inspection tools, and automated assembly processes. • Planned and supervised maintenance activities to maximize equipment uptime, analyzing downtime, identifying root causes, and implementing corrective actions to significantly improve Overall Equipment Effectiveness (OEE). • Oversaw, maintained, and optimized industrial robotic systems (ABB/KUKA/UR) and computer vision solutions for real-time object detection, tracking, and quality control in assembly and inspection lines. • Collaborated closely with production, quality, and supply chain teams to coordinate maintenance operations, ensure seamless workflow, and support continuous improvement initiatives that reduced maintenance costs and enhanced operational efficiency. • Managed CAPEX, budgets, and spare parts inventory while leading multidisciplinary teams in delivering high-impact automation projects focused on equipment reliability and technical excellence. • Prepared detailed technical specifications (cahiers des charges) for new machines and automated production cells; coordinated with suppliers to optimize designs, ensure cost-effectiveness, and successfully realize and integrate new equipment into the production lines. • Deployed advanced vision algorithms (OpenCV, TensorFlow) and robotic programming (Python, C++) to support predictive maintenance tools and long-term equipment reliability.		
Manufacturing System Lead	Sumitomo	2021 – 2023
• Led a team of 3 technicians and 1 engineer in the development and implementation of automated monitoring systems for industrial equipment, ensuring high reliability and supporting predictive maintenance strategies in an automotive manufacturing environment. • Directed the design and deployment of real-time monitoring solutions using Raspberry Pi cards, Linux-based systems, and custom scripting (Shell, C/C++, Python) to track equipment performance, generate statistics, and anticipate failures. • Managed technical issue diagnosis and resolution (mechanical, electrical, and control-system related) across production nodes, providing leadership and remote support to minimize downtime and achieve maximum equipment availability. • Spearheaded the implementation of innovative IoT and embedded solutions to optimize automated production lines, resulting in improved product quality, reduced maintenance interventions, and enhanced overall process efficiency. • Trained, mentored, and supervised technicians and new staff on system troubleshooting, monitoring tools, and best maintenance practices while managing project documentation, planning, tasks, and cross-functional coordination. • Drove continuous improvement initiatives through data-driven analysis and automation of maintenance-related tasks, contributing to significant cost reduction and operational excellence.		

Robotics Coach (part time)	<i>TopNiveau</i>	2021 – 2022
• ROS: Python, C/C++ • Robotics: Arduino, C/C++ • IOT: Arduino, Raspberry, Cloud		
Embedded Systems Engineer	<i>Heptatronics</i>	2020 – 2021
• C/C++ & Python • Robot Operating System • Autonomous robots development • Preparation of robots: Software and hardware specifications • STM & NVIDIA Jetson		
Client Service Supervisor	<i>Tunisia Telecom</i>	2017 – 2020
• Supervise and support a team of customer service representatives, providing coaching, training, and performance feedback to ensure service excellence. • Oversee client interactions, assist with complex or escalated issues, and ensure timely resolution to enhance client satisfaction. • Monitor customer service activities and performance metrics to ensure adherence to service standards and identify areas for improvement. • Develop and implement best practices for managing client inquiries, optimizing workflow, and improving team productivity.		

2 Education

ESPRIMS National Engineering diploma, Mechatronics engineering	2021
Faculty of Sciences of Monastir Bachelor, Physics	2016

3 Skills

• Team Leadership & Management • Technical Team Management (Technicians & Engineers) • Staff Training, Mentoring & Development • Project Management & CAPEX / Budget Control • Supplier Coordination & Vendor Management • Cross-Functional Team Collaboration • Continuous Improvement Leadership • Industrial Maintenance & TPM • Predictive Maintenance Tools & IoT • Root Cause Analysis & OEE Improvement	• Industrial Robotics (ABB / KUKA / UR) • Computer Vision Systems (OpenCV, TensorFlow) • Embedded Systems Design & Automation • Preparation of Technical Specifications • Robot Operating System (ROS) • Scripting & Process Automation (Shell, Python, C++) • Linux & Real-Time Monitoring Systems • Testing, Debugging & Troubleshooting • C/C++ • Python
